

ISUZU
RELIABILITY IS EVERYTHING

N Series & F Series.

4x4 & AWD.

GVM: 4,500 - 15,000kg
GCM: 8,000 - 21,000kg

The all-new Isuzu 4x4 & AWD range.

Reliability redefined.

When creating our most durable and refined 4x4 & AWD range yet, we asked ourselves: "what does reliability really mean?"

It means a truck that's built to get you where you need to be. A suite of safety features that breaks new ground in the off-road category. An improved ergonomic cab interior with new seating positions and comfort that turns rough roads into smooth sailing. And new transmission options that make off-roading seamless, putting more ease into every drive.

Our off-road 4x4 & AWD range delivers the innovative technology, sleek new cab design and driving efficiencies of our new trucks, but in a model that's purpose-built for the toughest off-road conditions.

And with a wide range of accessories, 3 year factory warranty and 24/7 roadside assist on the cab chassis, our 4x4 & AWD range is backed by Isuzu's renowned support. It isn't just reliable, it's reliability redefined.

Sleek new cab design.

Streamline your driving efficiencies.

The new cab is tough enough to take whatever the job throws at it. Reinforced for harsh conditions, designed for all-day comfort and low enough to get in and out without thinking twice – because when you're working hard, your cab should work harder.

It's also safer for both drivers and other road users, with Daytime Running Lights, Adaptive Driving Beam and an energy-absorbing three-piece front panel designed to reduce injury to pedestrians and vulnerable road users in low speed collisions. And with up to 99% UV protection built into the cabin glass as standard, the Australian sun is one less thing to worry about on long days behind the wheel.

Cab options.

Ride your way.

Whether you're carrying your crew to a remote site or travelling solo into the great unknown, all models in the 4x4 & AWD range come with a choice of day cab or crew cab variants so you can travel with leg room and storage to spare.

Our crew cabs are designed with everyone's comfort in mind, not just the driver's. Our largest model comes standard with a passenger ISRI climate seat, and in our smallest models, spacious interiors and rear cooling mean your passengers arrive ready to work, whatever the job entails.

NMS model

FTS model

Turbocharged diesel engine.

More performance.

Isuzu has developed a new generation of engines that combines reliable performance with adherence to strict new emissions regulations.

All of our 4x4 & AWD model engines are manufactured at the Tochigi engine assembly plant in Japan. Developed with performance in mind, the new engine capacities range from 3.0L to 6.7L, with some models offering up to 13% increase in power and 16% increase in torque.

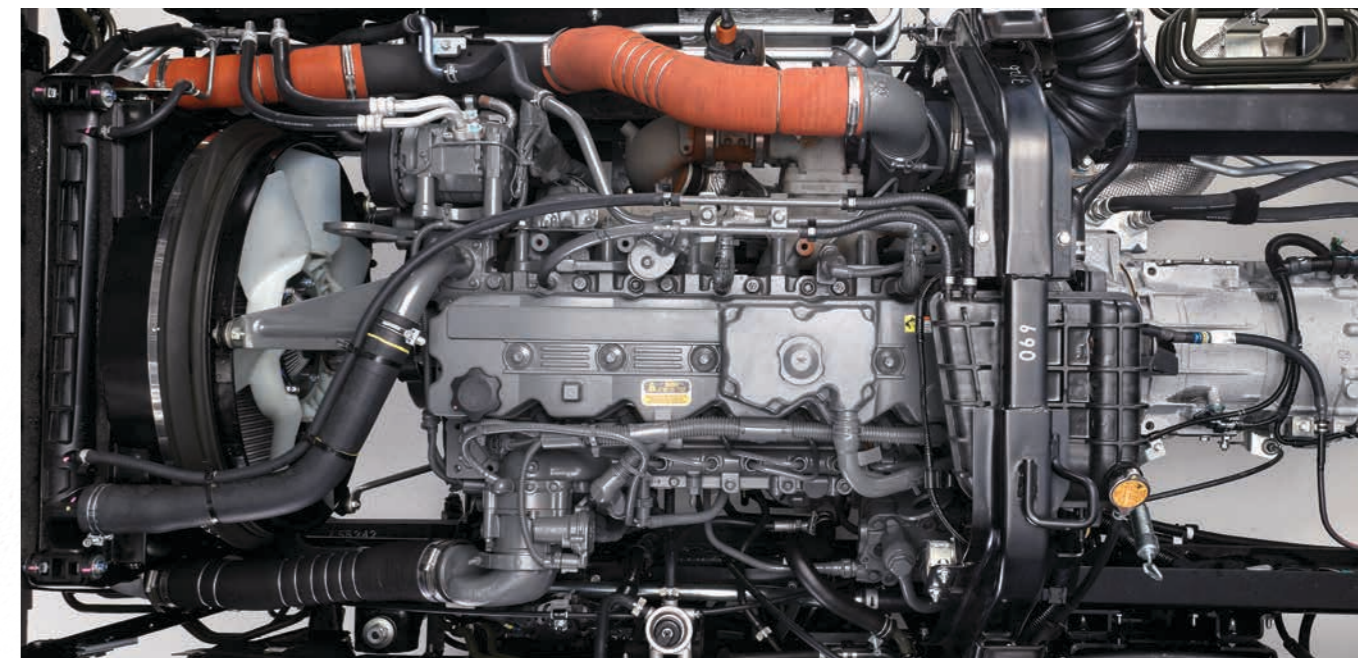

All engines in the new 4x4 range are designed with Catalytic Reduction (SCR) technology that utilises AdBlue® to reduce the amount of harmful gases being released into the atmosphere, while still getting the job done to the standard you expect.

*Preproduction model shown.

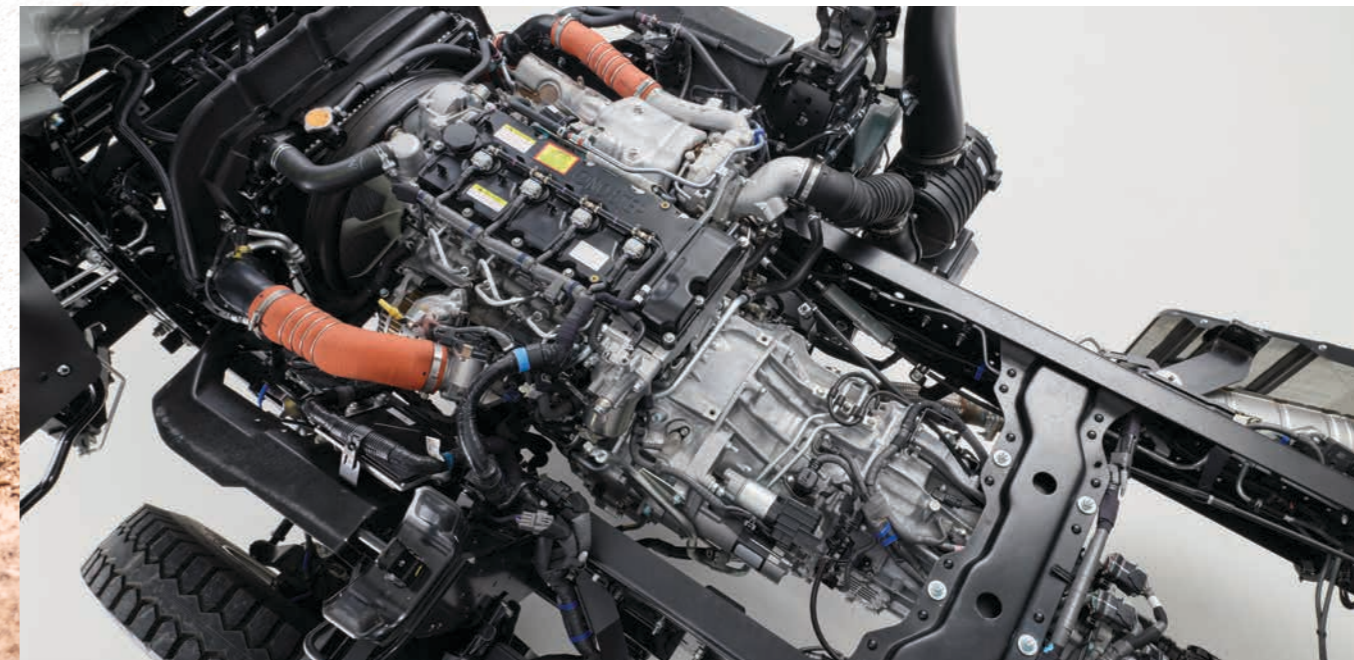

F Series engines.

Our F Series models are available with either a new 4-Cylinder or a new 6-Cylinder engine with up to 191kW (260PS) and 883Nm of torque, plus a compression release engine brake – so you'll be able to find the right combination of power and efficiency for your business.

N Series engines.

Our N Series models have two Isuzu common rail intercooled turbo-diesel options: our 110kW (150PS) power plant with 430Nm of torque and our 129kW (175PS) engine punching out 460Nm.

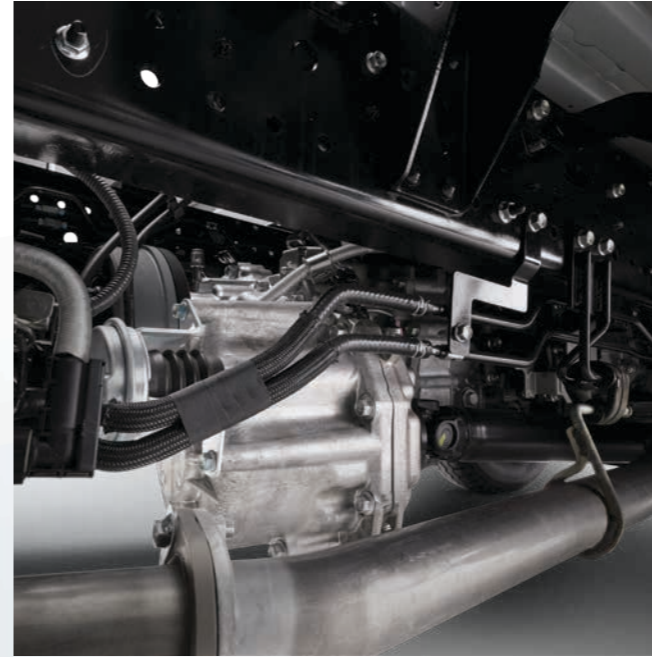

9-speed dual-clutch transmission.

Shift your expectations.

Whether you're out in the bush or cruising up the highway, the right power at the right speed makes all the difference. Isuzu's all-new 9-speed dual-clutch transmission delivers exactly that - keeping RPMs low for maximum fuel efficiency and a quieter cabin, while Isuzu-patented dual clutch technology enables full power 'milli-second' upshifts that reduce torque loss and provide seamless shifting.

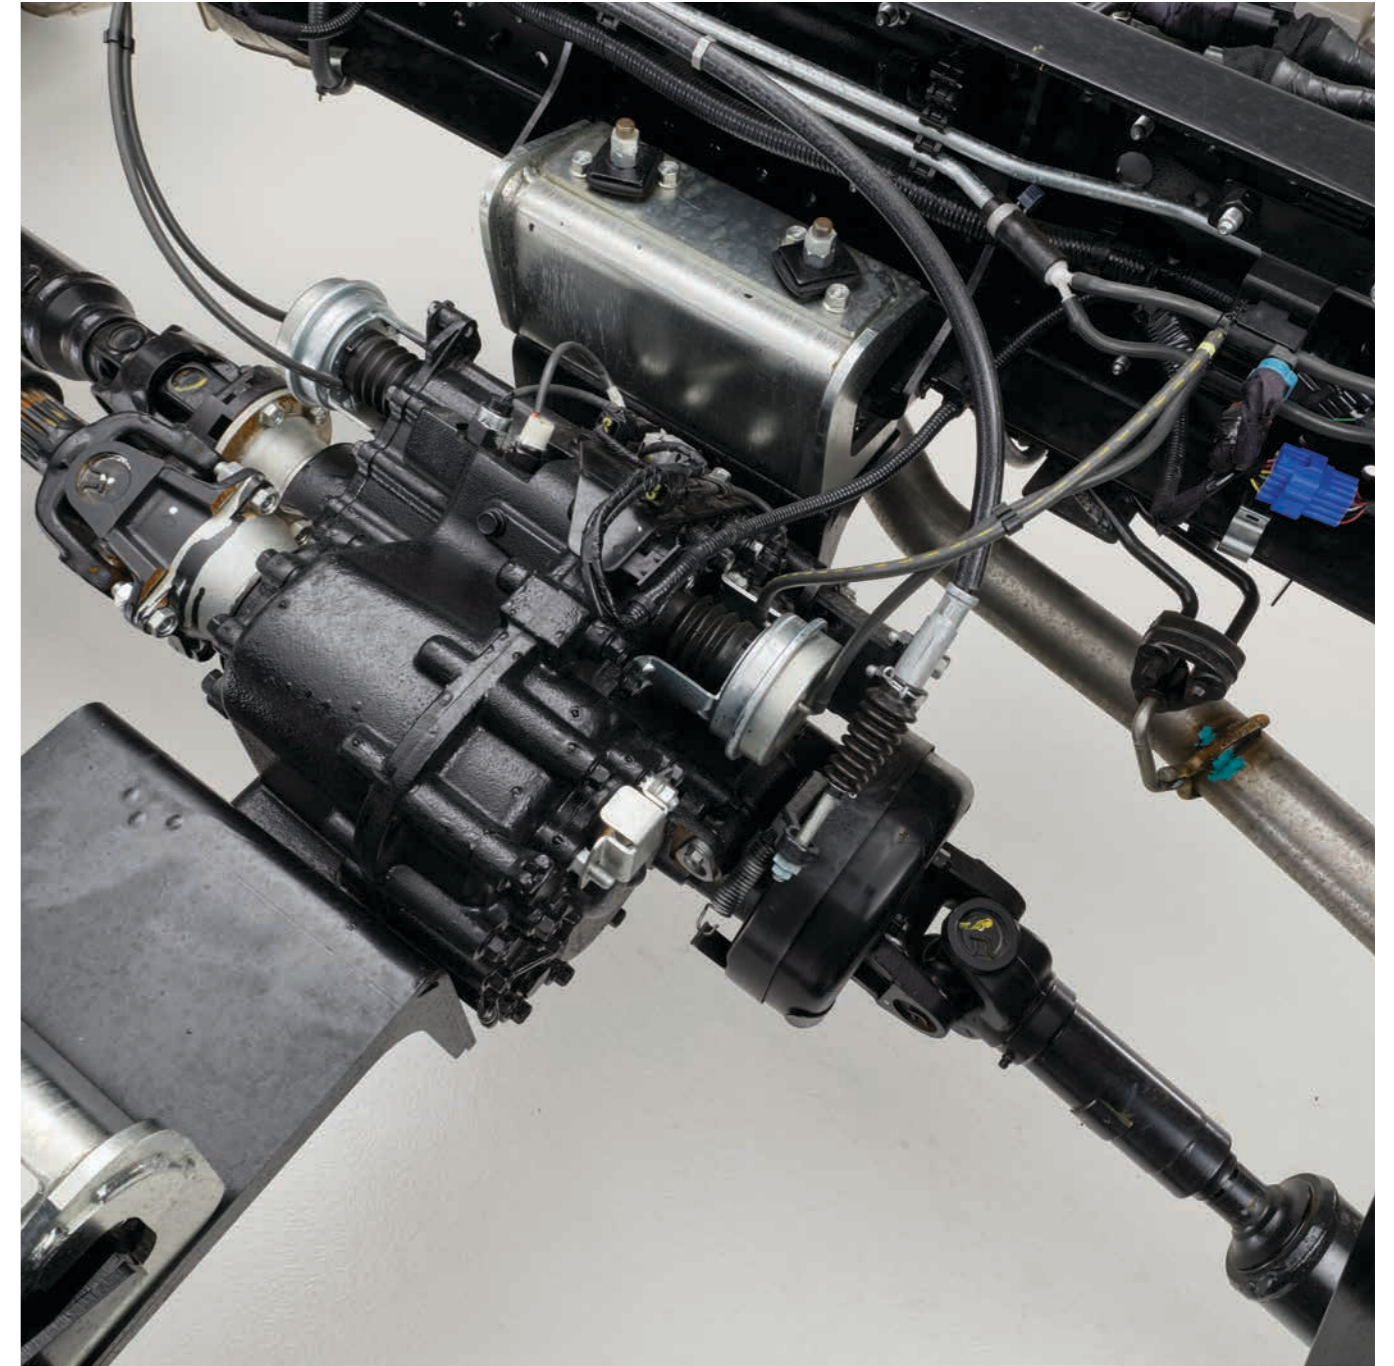

It's so smooth, you'll forget you're in a 4x4.

Available in N Series DT models with the 4JZ1 engine, the new transmission provides a car-like driving experience without sacrificing any off-road capability.

Remote Transfer Case.

The 4x4 range now features an independent, mid-chassis mounted transfer case for less weight in the gearbox and easier servicing. Other advantages include central weight distribution and increased reliability.

The range.

Always sure-footed.

NMS.

The NMS is built to give you confidence in unpredictable conditions. Its on-demand AWD system senses slip and shuffles drive between the axles automatically, giving you traction on wet grass, muddy job sites, clay tracks and greasy depot yards. It's the truck that keeps you moving when the surface turns against you.

With a choice of DT and MT, two GVM options and a tipper body option no competitor offers, the NMS handles more jobs in more conditions. Inside, a new cab design delivers a more comfortable and connected driving experience, while a class-leading safety suite comes as standard – purpose-built to keep you protected without getting in the way of the task at hand.

If your work is mainly on-road but conditions aren't always on your side, the NMS has you covered.

Only available in AWD, with a choice of day or crew cabs.

- MT models have up to 10,000kg GCM
- DT models have 8,000kg GCM
- Isuzu 4JZ1 4 Cyl 3.0L engine
- 110 kW power

- 430 Nm torque
- Independent torsion bar front suspension
- Reverse camera
- Driver and passenger SRS airbags

- Full speed adaptive cruise control (DT models only)
- Auto HVAC with manual rear cooling on crew cab variants
- 10.1" multimedia screen with Apple CarPlay/Android Auto

- Radio, safety and phone steering wheel controls

- 7,500kg GVM
- 11,000kg GCM
- Isuzu 4JZ1 4 Cyl 3.0L engine
- 129 kW power

- 460 Nm torque
- Manual transmission
- Multi-leaf front suspension
- Reverse camera
- Driver and passenger SRS airbags

- Cruise control
- Auto HVAC with manual rear cooling on crew cab variants
- 10.1" multimedia screen with Apple CarPlay/Android Auto

- Radio, safety and phone steering wheel controls

The range.

Your adventure starts here.

NPS.

From off-road touring setups to specialised work vehicles, the all-new NPS gives you a serious foundation to start with. With 175 PS and 460 Nm on tap, and a manual transmission for proper towing power, it's the truck that handles the hard work so you can focus on what matters: where next?

While other trucks in the range offer a full suite of safety features, the NPS has been purposefully kept simple – giving you an uncomplicated platform engineered strictly to endure the elements.

Available with a choice of day or crew cabs.

The range.

Built for the frontline.

NQS.

When the road ends, the NQS begins. Purpose-built with a driver-selectable 4x4 driveline and low range, it's designed for the terrain AWD can't handle - fire trails, creek crossings, unformed tracks and everything in between.

An 8t GVM opens up heavier bodies and equipment like tankers, tippers and crew-carriers, all while sitting under the light rigid licence limit. Paired with a 9-speed dual-clutch transmission for low-speed crawl and efficient highway cruising, plus a comprehensive safety suite, the NQS is built to offer customers the perfect mix of safety and payload.

Available with a choice of day or crew cabs.

- 8,000kg GVM
- 8,000kg GCM
- Isuzu 4JZ1 4 Cyl 3.0L engine
- 129 kW power
- 460 Nm torque

- 9-speed dual-clutch transmission
- Multi-leaf front suspension
- Reverse camera
- Driver and passenger SRS airbags

- Adaptive cruise control
- Auto HVAC with manual rear cooling on crew cab variants
- 10.1" multimedia screen with Apple CarPlay/Android Auto

- Radio, safety and phone steering wheel controls

The range.

Built for the frontline.

FSS

The narrowest of our 4x4 F Series models, the all-new FSS navigates fire trails and mining roads that bigger trucks simply can't reach - while its 11t weight offers lower operating costs.

A manual 6-speed transmission gives you the clutch control you need on steep hills, while the 5.2L sequential twin-turbo diesel delivers 706 Nm of torque for serious pulling power.

The FSS now features a class-leading ADAS suite - a genuine step up from the previous generation - giving drivers and crews greater protection in high-stakes conditions. And with a heated and ventilated ISRI driver's seat, it helps long shifts feel a little bit shorter.

Available with a choice of rest or crew cabs.

- 11,000kg GVM
- 15,500kg GCM
- Isuzu 4HK1 4 Cyl 5.2L engine
- 154 kW power
- 706 Nm torque

- Manual transmission
- Multi-leaf single-stage steel front suspension
- Reverse camera
- Driver and passenger SRS airbags

- Cruise control
- Auto HVAC
- 10.1" multimedia screen with Apple CarPlay/Android Auto

- Radio, safety and phone steering wheel controls

- 15,000kg GVM
- 21,000kg GCM
- Isuzu DB6A 6 Cyl 6.7L engine
- 191 kW power
- 883 Nm torque

- Automatic transmission
- Multi-leaf single-stage steel front suspension
- Reverse camera
- Driver and passenger SRS airbags

- Cruise control
- Auto HVAC with rear cooling on crew cab variants
- 10.1" multimedia screen with Apple CarPlay/Android Auto

- Radio, safety and phone steering wheel controls

FTS.

With a newly increased 15t GVM, the market-leading FTS goes to the next level of payload in the segment.

An all-new 6.7L six-cylinder diesel engine delivers 883 Nm of torque across a wide RPM band, paired with an Allison automatic transmission that matches how emergency crews actually drive in the field. Add the I-Brake engine compression brake and you've got a heavy-duty 4x4 that redefines grunt and control on steep descents.

Used by almost every fire agency in Australia and trusted across mining, bus manufacturing and remote logistics, the FTS is built for the jobs others can't handle. A full ADAS safety suite, Bi-LED headlamps, auto climate control and heated and ventilated ISRI seats for both driver and passenger make it as comfortable and capable as it is tough.

Available with a choice of rest or crew cabs.

Advanced Driver Assistance Systems.

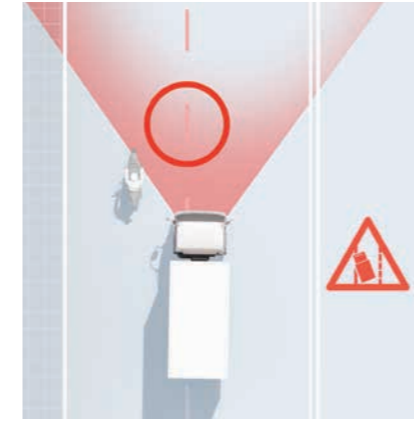

Smarter than your average 4x4 and AWD.

ADAS is a suite of intelligent active safety systems. Each feature works together seamlessly to reduce the chance of an accident or mitigate damage if an accident does occur.

The new Isuzu off-road range is delivered with a whole suite of ADAS features to help keep drivers and other road users safe.

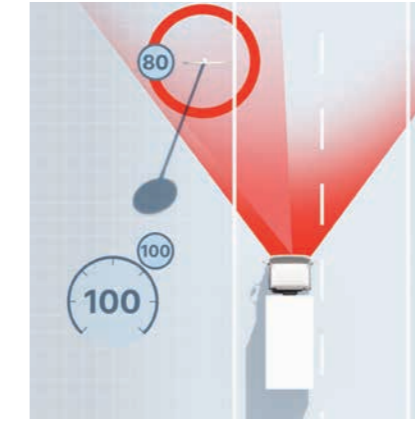

With innovative features like Traffic Sign Recognition, Full Speed Adaptive Cruise Control and Advanced Emergency Braking, your Isuzu truck can help to detect vehicles, pedestrians, obstacles, lanes and traffic signs – and react when needed.

*Please note, not all features are available on all 4x4 and AWD models.

Lane Departure Warning

LDW can detect lane markings and provide an audible and visual warning under certain conditions if the driver wanders near or out of the lane. The driver can select two sensitivity settings or switch the feature off.

Traffic Sign Recognition

The ADAS' camera recognises particular traffic signs, including speed limit signs, and informs the driver by displaying them on the dash instrument panel.

Full Speed Adaptive Cruise Control

FACC uses a stereo camera (on N Series models) or a radar and camera (on F Series models) to detect the vehicle in front of the truck, then maintains a set distance from that vehicle by slowing or speeding up the truck accordingly. FACC will work at any speed, so if the vehicle ahead comes to a stop, the truck will too.

Intelligent Speed Limiter

If the TSR detects a change in speed limit, it alerts the driver who can then accept the change to their cruise control speed by operating the resume button.

Attention Assist System

When the truck is moving at speeds above 60 km/hr (on F Series models) or 70 km/hr (on N Series models), AAS will alert the driver if the system detects any inconsistent steering input and will suggest that the driver takes a break.

Advanced Emergency Braking

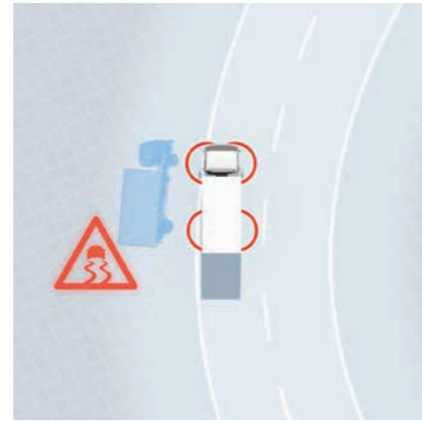

If the driver fails to brake after the vehicle warns of a pedestrian, cyclist or other vehicle appearing unexpectedly, in certain conditions, the AEB system can apply the brakes automatically to avoid a collision. The brake lights will also come on during this process.

Please note, not all features are available on all 4x4 and AWD models.

Active safety features.

Isuzu intelligence.

The eyes behind Isuzu's ADAS is a highly effective dual-lens camera on N Series models and a combination of an optical sensor and a milliwave radar on F Series models. It monitors the forward environment to detect objects such as vehicles, pedestrians and cyclists, determine the object and measure its size, distance, and velocity.

Electronic Stability Control

ESC uses data from a number of sensors to monitor driver input and vehicle control. If it detects understeer, oversteer or roll-over, ESC can override driver input, reduce power and/or apply individual wheel braking and assist the driver to maintain vehicle control.

Customisable Speed Limiter

CSL allows vehicle owners to set a predetermined maximum speed that the driver cannot accelerate beyond. Models with a GVM above 12,000kg are limited by law to 100km/h.

Hill-Start Aid

HSA is included on trucks with manual transmissions. When the brake pedal is applied on a hill, the brake pressure is maintained until the clutch is released (or eight minutes) to assist in preventing the truck from rolling back.

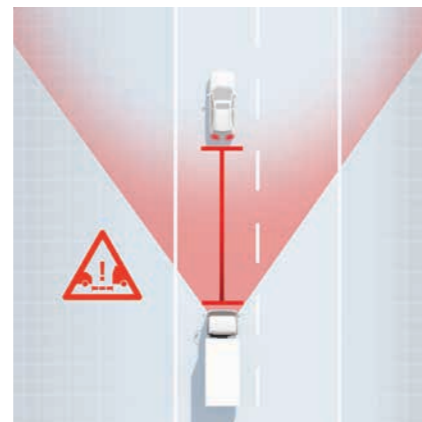

Anti-Skid Regulator

ASR detects when either or both rear wheels are spinning faster than the other on a loose surface, then reduces torque and/or applies the brake to the spinning wheel to improve traction.

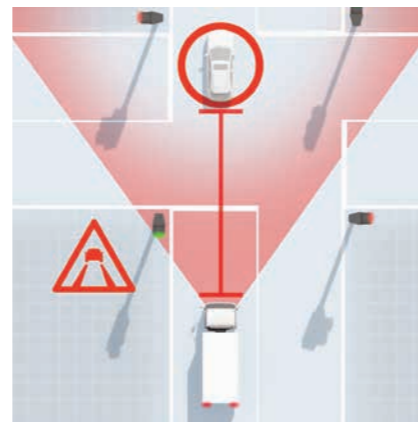

Missed Acceleration Mitigation

Available on AMT N Series models, MAM helps to slow the truck's acceleration and mitigate collision damage when the system determines the accelerator pedal is depressed more than needed, such as by accident, while the vehicle is stopped and has an obstacle in front of it.

Distance Warning System

DWS helps drivers to maintain a safe distance from the vehicle ahead by giving a warning if a pre-set distance is reached. The driver can choose from four pre-set minimum distances.

Traffic Movement Warning

TMW monitors stationary vehicles in front of the truck. If the vehicle ahead moves more than a set distance and you don't follow along, an audible and visual warning sounds.

Cab Tilt Warning

If CTW recognises that the cab tilt is not fully locked, an audible and visual warning sounds.

Electric Park Brake

EPB will automatically apply the park brake when activated by the driver, ensuring the correct amount of parking brake force is applied. EPB will automatically apply when the vehicle is in park.

Anti-Lock Braking System

ABS determines if a wheel is locked and not turning. It then releases the locked wheel brake and reapplies pressure to reduce locking and maintain control, allowing the driver to effectively steer and brake at same time.

Forward Collision Warning

FCW scans the road ahead to detect vehicles, pedestrians, bicycles, or other obstacles. Using a stereo camera system on N Series models and a combination of a stereo camera system and milliwave radar on F Series Models, FCW enables the truck to judge distance and relative speed in a similar way to human eyesight. If it senses a potential collision, it will warn the driver to brake.

Available on NMS and NQS models only.

Please note, not all features are available on all 4x4 and AWD models.

Passive safety features.

Tough on the outside. Safe on the inside.

Isuzu's Cabin Occupant Safety Systems (COSS) are a range of passive safety features, for example the Supplementary Restraint System (SRS) and ECE-R29 certified cabs, that work seamlessly together to reduce the risk of injury and minimise damage in the event of an accident. They're meticulously designed, fitted and tested to ensure they offer superior protection and reliable performance when you need it most.

Cabin ECE-R29

Isuzu trucks are built to the ECE-R29 safety standard, which is a global test certification from the United Nations. This cabin rating means that the truck's cab has been designed to withstand excessive deforming in case of an incident. This rating isn't currently mandatory in Australia, but cabs that are ECE-R29 approved offer superior protection for their occupants.

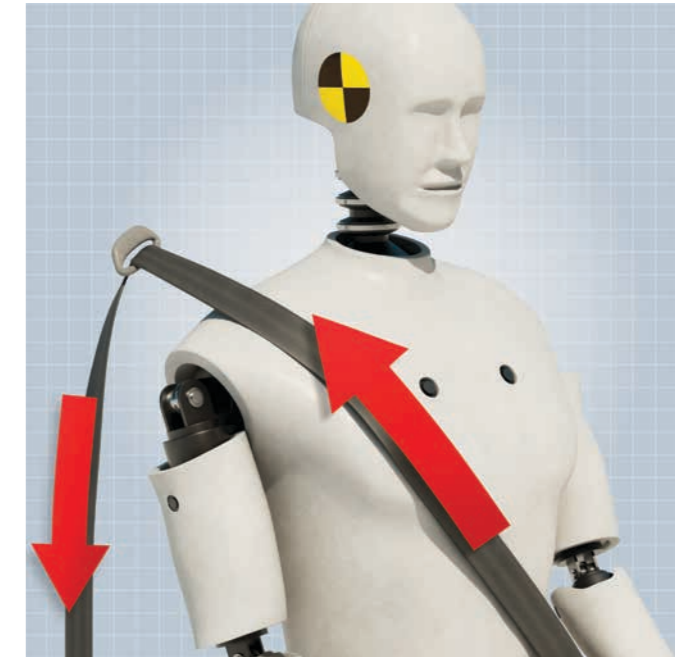

The Supplementary Restraint System (SRS)

In the event of a collision, the Supplementary Restraint System (SRS) will determine if the incident is above a certain intensity, and deploy airbags in a split second to cushion the cabin occupants and help reduce any injuries.

Anti-Intrusion Bars

Additional reinforcement installed into the structure of the truck's doors, Anti-Intrusion Bars protect cabin occupants in case of an incident.

Seat Belt Pretensioner (Driver and Front Passenger)

If the SRS senses sharp deceleration that indicates an accident, it will automatically tension the seat belt to pull the occupant back into their seat and reduce the chance of injuries.

Advanced technology.

Brawn meets brains.

The new 4x4 models arm you with the latest technology and intelligent features where you need them most. Rain-sensing wipers* that respond before you do. Lighting that keeps you visible out in the bush. And multimedia and navigation that keep you connected when you leave civilisation behind.

*On F Series models only.

MyIsuzu Co-Pilot AV System

The MyIsuzu Co-Pilot multimedia system features a 10.1 inch touch screen, Apple CarPlay, Android Auto, and digital/internet stations. Navigate through the menu, or for even greater convenience and safety, use voice-controls for many of the available functions. Hands-free Bluetooth and truck-specific navigation are standard.

LED Daytime Running Light

DRL is a strip of light integrated into the truck's headlamps that is turned on while driving with headlights off for extra visibility in all conditions.

Bi-LED Headlamp

Our innovative new headlamp design offers improved nighttime visibility with a larger area of illumination and Bi-LED beam.

Auto Wiper System

AWS uses a rain sensor to automatically wipe the windshield when needed and vary the frequency of the wipe, depending on the amount of rain detected. The level of raindrop sensitivity can be adjusted and, while AWS is operating, the wiper will be set to high if the sensor detects water splashed by an oncoming vehicle.

Automatic Lighting System (Front and Rear)

ALS monitors exterior light levels and automatically turns on the headlights and tail-lights if needed.

Passive Entry and Start System

No more rummaging around for your key. PESS uses proximity sensors to detect the location of your truck's key fob and allows you to lock and unlock the vehicle's doors and start the engine without using a key.

Electric Park Brake

EPB will automatically apply the park brake when activated by the driver, ensuring the correct amount of parking brake force is applied. EPB will automatically apply when the vehicle is in park.

Please note, not all features are available on all 4x4 and AWD models.

Cab interior.

The great indoors.

With a new instrument cluster and steering wheel controls, Isuzu's updated cabin interior puts everything you need within reach - so you can keep your eyes on the terrain and your hands where they belong.

When you're working in extreme heat, navigating fire trails or spending long shifts behind the wheel in remote conditions, your cab isn't just where you drive - it's where you recover. Automatic climate control keeps the temperature right no matter what's happening outside, while UV protection across the windscreen, door and backlight glass takes the sting out of long days under the Australian sun.

Digital Instrument Cluster

The new instrument cluster offers increased centre storage space, easier access for maintenance and the installation of advanced items.

Full Colour TFT Multi-Information Display

All new 4x4 trucks feature a full colour, user-friendly 7" display between the speedometer and tachometer.

ISRI Seat

From long distance driving to short trips to the jobsite, the newly installed ISRI driver's seat is optimised to give you unrivalled support and comfort for the duration of your drive. Available on F Series models, the new seat uses ventilation and heating to keep drivers comfortable in any season, along with an armrest to reduce driving fatigue. It also incorporates an inner seat belt to reduce neck and shoulder pressure, a middle folded seat to support the driver's position, lumbar support, adjustable cushioning and rapid descend for easy access.

Illustration purposes only. 4x2 model shown.

UV / IR Glass

Our new cabin glass keeps you comfortable and protects your skin by lowering the cabin temperature and reducing UV damage. It offers up to 59% infrared ray protection and 99% ultraviolet ray protection in the windscreen, and up to 90% ultraviolet protection in the door and backlight glass.

Automatic Climate Control

Whether you like it hot or need to keep your cool, the Automatic Climate Control system monitors the interior cabin temperature and sunlight intensity, and will heat or cool the cabin to your pre-set temperature. Crew Cab variants also offer rear cooling to keep the whole team comfortable.

Steering Wheel Controls

With a smaller diameter for car-like feel and control, easier handling and controls for the MID, safety systems, cruise control and an AV unit, our new steering wheel is made for a smoother and more enjoyable drive.

Accessories.

Australia's no.1 truck, made more you.

From bullbars and tow bars to dash mats and driving lights, Isuzu has the perfect range of accessories to customise your 4x4 vehicle.

Whether you're fitting out for a remote worksite or protecting against unforgiving off-road conditions, every Isuzu Accessory is designed, tested and fitted to ensure they offer the same performance, safety and reliability as your Isuzu truck.

Isuzu Care.

A new level of support.

The all-new Isuzu 4x4 range redefines safety, efficiency and comfort - and deserves the customer care programme to match.

Care comes in many forms at Isuzu, whether it's peace of mind that your 4x4 truck is covered by a 3 year warranty, having access to a suite of innovative support services or knowing that the part you need is never far away thanks to a state-of-the-art Australian distribution centre.

Dealer network.

Isuzu has an extensive network of dealers around Australia. So no matter where you are, you'll never be too far from a dealer if you need support.

CARE

3 year factory warranty.

When we say reliability is everything, it's more than just talk. That's why our all-new AWD and 4x4 trucks come with a 3 year factory warranty on the cab chassis and any Ready-to-Work bodies.

3 year 24/7 roadside assist.

Isuzu Assist offers 24/7 roadside assistance for 3 years with all AWD and 4x4 trucks.

The pillars of Isuzu Care.

Isuzu Care is a combination of unique customer service and support programs, all working together seamlessly to redefine the experience of owning an Isuzu truck.

Customer support.

Our dedicated local specialists are on hand to ensure that every part of your business runs smoothly. These support services include industry best practices, offering leading customer engagement and feedback tools.

Productivity.

To get any job done, you need the right tools. Isuzu offers a wide range of truck models, supported by Australia's largest dealer network and innovative product design and support systems. All of these elements work together to enhance your business productivity.

Reliability.

Isuzu trucks are known for their reliability. But at Isuzu, reliability is a lot more than the truck itself. From our 3 year warranty and roadside assist package, to our state-of-the-art Australian parts distribution centre, we take 'reliability is everything' to a whole new level.

Service agreements.

Servicing made easier.

Few things cause as much pain to a business as a big, unexpected bill. And while we can't help with all of your outgoings, Isuzu's service agreements will flatten your truck servicing costs into a single, predictable, monthly payment (or upfront fee in the case of Isuzu Essentials).

Plus, looking after your truck pays bigger dividends than just smoothing out your servicing costs. Proper maintenance lowers the total cost of ownership, reduces downtime, and improves the revenue of every load. You can also rest easy knowing that with a service agreement, you'll be running a well-maintained fleet which means safer trucks for your drivers and protection for your business.

Isuzu Essentials.

Available on new trucks only and paid upfront, Isuzu Essentials covers your truck's first three regular services up to either your 36 month or 45,000 or 60,000km service (whichever comes first. Distance depends on truck model).

Parts.

The perfect fit.

Legendary off-road reliability deserves the parts to match. With superior quality and fitment, choosing Isuzu Parts means your truck keeps performing where it matters - out in the bush, on the worksite and everywhere in between.

Isuzu Parts are backed by industry-leading support and a 3 year warranty for reduced downtime, so you can spend more time on (and off) the road. When fitted by an authorised Isuzu technician, Isuzu Parts can also help to extend the working life of your truck.

So if you're looking for value for money, safety and long-lasting performance from your 4x4, it has to be Isuzu.
